

141 International Transferability of
Crash Modification Factors (CMFs)

Michael Tziotis, National Manager, Safe Systems
Road Safety

Workshop recap

- OECD and TRB are seeking to:
 - harmonise and improve research on CMFs
 - maximise the transferability of CMFs
- Purpose of this workshop is to learn and share from the experiences from the audience

Open Discussion

Why is it important to have CMFs transferable?

What has been your experience with the use of CMFs?

Keys issues for discussion

- Under what circumstances should CMFs be transferable?
- In Australia about 1 in 5 treated sites has a single treatment, how should we deal with multiple treatments?
- How can we test the transferability of CMF's?
- How might we calibrate CMF's across developed and developing countries?
- At what level of study robustness (1 – poor to 5 – excellent), should we consider transferability?
