The Global economic crisis hit foreign trade in ITF member countries during the last quarter of 2008

The global economic crisis is reflected in the trade figures in the last quarter of 2008. Compared with the last quarter of 2007, imports and exports of goods in current values fell by 3.8% and 4.7% respectively. Overall growth in trade for the year, however, remained positive due to the strong growth during the first three quarters of 2008. Imports and exports of goods increased by 7.8% and 7.3% respectively in 2008. Household expenditure was hit first by the mortgage crises, declines in freight transport followed later in the year.

Households were hit hard by the mortgage crisis – registrations of new private cars declined sharply in the second half of the year

Purchases of new cars fell in many member countries throughout the year, although trends in some countries deviated strongly from the overall pattern. Registrations of new cars in the EU area fell by 7% in 2008 as a whole. In the United States they fell by 11.3% and by 3.9% in Japan. The situation worsened sharply in the second half of the year. Registrations of passenger cars in the US fell by 10.6% in Q3 and by 32.1% in Q4. Declines were large in the EU area as well, namely 9.1% and 16.5% in Q3 and Q4 respectively.

### Key Transport Statistics 2008

The transport sector was hit by the crisis in the last quarter of 2008

Rail freight transport in the EU and the United States fell by 3.6% and 1.3% respectively in 2008 while it grew by 1.2% in the Russian Federation. Rail freight fell sharply in almost all member countries in the last quarter of 2008 with only Denmark, Estonia and Latvia showing growth. Freight volume declined by over 10% in the last quarter in the EU, the United States and Russian Federation (which cover 92% of overall rail freight in ITF member countries). A similar pattern is emerging for road freight although reliable statistics are not yet available.
