Infrastructure Investment for long term gains

Phil Allan
Executive Director, Road Safety, Department for Transport, Energy & Infrastructure, South Australia
Chair, Austroads Road Safety Taskforce

promoting improved road transport outcomes

www.austroads.com.au
The problem

Percentage of serious casualties by crash types

Based on Victoria road crash data, 2003-2007

- Run off road: 29%
- Intersection (excluding rear end, head on and run off road): 34%
- Rear end: 10%
- Head on (not overtaking): 7%
- Others: 20%

Infrastructure solutions?

promoting improved road transport outcomes

www.austroads.com.au
Australia’s Safe System

Safer travel

Admittance to the system

Safer speeds (lower speeds are more forgiving of human error)

Understanding crashes and risks

Physical forces on road users stay within human tolerance

Safer vehicles

Safer roads and roadsides (more forgiving of human error)

Education and information supporting road users

Enforcement of road rules

Alert and compliant road users

www.austroads.com.au
Safer Roads and Roadsides

- Needs to be both on road (largely preventative) and roadside (largely protective).

- Needs to be include new and existing projects.

- Could be network wide, area or road specific or project specific.

- The cost can vary – even low-cost safety-focused road treatments are associated with substantial crash and injury reductions.

- Spend versus speed debate

*promoting improved road transport outcomes*

www.austroads.com.au
What is in scope?

Some options include:

- Intersection treatments
- Roadside barriers
- Roadside hazard removal
- Separation of road users
- Traffic calming
- Edge and centre line tactile markings
- Shoulder sealing
- Delineation improvements
- Improved or advanced warning signage
- Road upgrade

But given the money required needs to be targeted.

promoting improved road transport outcomes

www.austroads.com.au
Example: Shoulder sealing (30% reduction in casualty crashes) and guard fence

Before

promoting improved road transport outcomes

After

www.austroads.com.au
Example: Wire Rope Safety Barriers (barriers lead to a 30 – 45% reduction in casualty crashes)

Before

promoting improved road transport outcomes

www.austroads.com.au
After promoting improved road transport outcomes

www.austroads.com.au
NSW Lessons from Wire Rope Safety Barrier

The Benefits:

- Reduces head-on and run off road crashes
- Greatly reduces the severity of crossover crashes
- Lowest risk of injury and damage in cases when a vehicle crashes into a barrier
- Lower crash costs when compared with crashes into other barrier types
- Occupy less space on the road than other barriers
- No evidence that wire rope barrier more dangerous to motorcyclists than other barriers (major study underway)
- Enhances motorcyclist safety by separating opposing traffic flows

www.austroads.com.au
Intersection treatment
e.g. roundabout (70% reduction in casualty crashes (55% for urban))

Before

promoting improved road transport outcomes

www.austroads.com.au
Pedestrian refuges

- These can lead to a 15% reduction in casualty crashes

promoting improved road transport outcomes

www.austroads.com.au
Clear Zones

promoting improved road transport outcomes

www.austroads.com.au
Clear Zones

• 10 – 45 % reduction in casualty crashes

promoting improved road transport outcomes

www.austroads.com.au
Edge or centre tactile lines

- Edge lines – 25% reduction

promoting improved road transport outcomes

www.austroads.com.au
Advanced warning signage

- 25 – 30% reduction in casualty crashes

promoting improved road transport outcomes

www.austroads.com.au
Delineation

- Delineation e.g.:
  - Line marking = 20% reduction
  - Chevron alignment markers = 30%
  - Guideposts = 30% reduction

Promoting improved road transport outcomes

www.austroads.com.au
Traffic calming

• On urban roads – 20% reduction

promoting improved road transport outcomes

And many more…

promoting improved road transport outcomes

www.austroads.com.au
Vulnerable road users promoting improved road transport outcomes

www.austroads.com.au
Pedestrians

Shared Use Paths

Shared Zones

School crossings

Variable speed limit signs

www.austroads.com.au
Targeting infrastructure works on higher speed roads (>80 km/h) – speed vs spend

Casualty Crashes per 10^8 Vehicle Kilometres Travelled (VKT) by Annual Average Daily Travel (AADT) on Rural Road Sections in Victoria (excl. intersection crashes)

- Review speed limits
- Infrastructure Solutions

Monitor
Better targeting through reporting performance

promoting improved road transport outcomes

www.austroads.com.au
Victoria’s Safer Road Infrastructure Program

• Started 2004 on arterial road network funded by Transport Accident Commission ($240m to 2006 then $650m from 2007 over 10yrs)
• Uses crash based approach similar to black spot programs but includes treatments for high risk sections for route consistency
• A combination of targeted infrastructure improvements to be delivered across Victoria:
  – Safety barriers
  – Removing hazards from the roadside
  – Sealing road shoulders
  – Improved signage and road guidance (e.g. tactile edge and centre lining)
  – Intersection improvements
  – Lower speed limits (40km/hr strip shopping)
  – Grey spot program – prevent becoming a black spot

**Promoting improved road transport outcomes**

New South Wales Route Reviews

• A strategic multi-disciplinary approach targeting ‘High-risk’ routes with engineering behavioural and enforcement strategies

• Engineering strategies include delineation, shoulder sealing, hazard removal, roadside and median wire rope barriers, rest areas and intersection improvements

• The program is developed to supplement planned maintenance treatments and precedes longer term and more costly road upgrades

• Two major highways – Pacific and Princes chosen initially

www.austroads.com.au
Pacific and Princes Highways

- **Pacific Highway**
  - $35 million of program works over a 3 year period
  - Total of 52 projects varying in cost from $8000 to $7.68 million
  - 55 fatalities and 617 injuries in 2003 reduced to 25 fatalities and 483 injuries in 2006

- **Princes Highway**
  - $30 million of program works over a 3 year period
  - Total of 50 projects varying in cost from $7000 to $1.9 million
  - 24 fatalities and 324 injuries in 2003 reduced to 4 fatalities and 294 injuries in 2006

- These figures represent a total saving of 50 lives and 164 injuries per year for these two highways

www.austroads.com.au
High returns on investment

• The benefits are expected to last for around five to fifteen years following completion although some sections of the Pacific Highway are expected to be replaced due to general upgrading over time

• Benefit Cost Ratio

www.austroads.com.au
Shoulders and curves

- Relationship between curve radii and crash severity on high speed roads
- Road alignment of less than 1000m radius comprises only 21% of the total length of NSW State roads
- Yet 60% of rural crashes occur on these curves
- Probability of certain types of crashes occurring is proportionately much higher than for similar type crashes on straight or large radius curve alignments.

promoting improved road transport outcomes

www.austroads.com.au
Shoulder widths

- Shoulder widths: Variation in width of shoulder on curves Vs straights

Where the horizontal alignment is made up of long straights and single isolated curves then the outside of all curves in both directions with a radius less than 1000 metres should be identified and prioritised.

promoting improved road transport outcomes

www.austroads.com.au
Shoulder widths

- Shoulder widths: Variation in width of shoulder on curves Vs straights

Where the horizontal alignment is made up of two reverse curves with both radii less than 1000 metres, then the outside of both curves should be treated.

promoting improved road transport outcomes

www.austroads.com.au
Main Roads WA “Vision Zero” Logical Framework

- Took new 70 km Perth-Bunbury Highway project and generated internal analysis and discussion about response to Safe System principles
- Focussed on key crash types, including Run-off Road, Head-on, and Intersections
- References safe speed thresholds as goal where conflicts exist
- Overall goal of no deaths or serious injuries within first five years of operation
- Enabled innovative thinking and improvements that will see outcome closer to the ultimate aspiration than otherwise would have been the case

promoting improved road transport outcomes

www.austroads.com.au
Urban speed limit reduction

Outcome: Number of casualty crashes fell by 23%

promoting improved road transport outcomes

www.austroads.com.au
Rural speed limit reduction

Outcome: Number of casualty crashes fell by 20%

promoting improved road transport outcomes

www.austroads.com.au
Research and Trials

• Victoria trialling rumble strips on approaches to intersections & level crossings, and investing in Innovative Intersection Treatments Study

• Austroads program
  – Development of risk assessment tools, safety engineering and safety audit toolkits
  – Full evaluation of median wire rope barriers
  – Performance measures for safety contribution of road engineering
  – Exploring valuation of safety in transport projects, and shift towards Willingness to Pay

promoting improved road transport outcomes

www.austroads.com.au
Lessons

• There are opportunities for every road authority to apply safe system principles

• Safety managers need to engage early and often with engineers to:
  – Understand and prioritise primary crash types and routes for treatment
  – Ensure all new projects are safe system focused
  – Develop compelling, well targeted, business cases to gain best economic returns

• There is plenty of analysis, evidence and practice to start with. Then seek further investment over time as local results are demonstrated
